

Heartland Internet Banking System Requirements

This guide provides you with information about the technical requirements needed for our Internet Banking service

Supported browsers

- Google Chrome – latest version
- Mozilla Firefox – latest version
- Microsoft Internet Explorer – version 11

We highly recommend that you always use the current version of your preferred browser to enable our Internet Banking site to function as designed. It is also important that you keep up to date with any security updates that are available.

If you use an older version, or a browser that is not on our supported list, you may notice that some features and functions may not work or display correctly.

How do I check which browser version I'm using?

Open the browser and either click on 'Help' or 'Settings' and then click on 'About'. The browser type and version will display.

How do I upgrade my browser version, if I don't already have the latest version?

You can download them for free from the internet, click on the link below for your browser:

- [Google Chrome](#)
- [Microsoft Internet Explorer](#)
- [Mozilla Firefox](#)

What is JavaScript?

JavaScript is a standard programming language that can be included in web pages to provide functionality such as menus, sounds, and other interactive features. In order to use our Internet Banking site, you need to have JavaScript enabled in your browser.

Most browsers have JavaScript enabled by default. If you need to manually enable JavaScript for your browser, please click on the below help links.

- [Google Chrome](#)
- [Microsoft Internet Explorer](#)
- [Mozilla Firefox](#)

Security

We also highly recommended you install a personal firewall, spyware detection software and anti-virus software on your computer, and ensure they are updated frequently.
